

Flock - DeAI Day Vienna 2025

Yifan Xie - VP of DevRel

Flock.io

Flock.io: 'Uber for MLEs'

AI Arena

Flock maintains an **AI model repository** for (D)apps to deploy, devs **compete to iterate better models**

FL Alliance

Developers act as **decentralised training nodes**, train a global model together while data stay local

AI Moonbase

A platform **distributes continuous rewards** to contributors who participate in model training, validation, and delegation.

AI Arena

Flock Moonbase

- Rewards are generated when the model is utilized by agents or other application-layer services

Train **Thousands of Models**

Standard Model **API** for AI Agent to Upgrade

Train Once, **Earn Limitless**

Supports Various **Networks and Launchpads** (Base/Solana/Etheruem/Aptos/Virtuals)

Solution - for Enterprise-level Clients

Service for Our Clients

- Provides tailored consulting services to help clients design and deploy privacy-preserving AI solutions on optimized bare metal infrastructure. This enables secure end-to-end AI product development from infrastructure setup and bare metal consultation and optimization, through model training to deployment with robust privacy protection at every stage.
- Delivers enterprise-grade AI solutions designed for sector-specific needs across finance, healthcare, retail, and public services, etc., ensuring seamless integration from infrastructure to real-world applications.

Tech Stack - deFL

Privacy by Design and Default

Adopt Federated Learning(FL): Preserves data privacy by training models locally on-device, ensuring no raw data is transmitted or exposed during the learning process.

Localized Operations: Enable on-premise deployment on private servers or clouds, with data encrypted and processed on edge devices to ensure maximum privacy, regulatory compliance, and operational control.

Secure by Design: The entire workflow is built with security at its core, protecting sensitive data throughout processing, storage, and transmission.

Tech Stack - MMRAG

Multi-Modal Retrieval-Augmented Generation

An Advanced, Secure, and Decentralized RAG

- **Powerful Reasoning with Managed Risk:**

MMRAG connects different data to find insights. To stay secure, we use Mandatory Self-Correction, which clearly labels inferences to ensure secure and transparent reasoning.

- **Auditable Generation for Enhanced Security:**

AI-generated content is fully traceable to its source, helping users distinguish between explicit facts and potentially risky inferences. This audit trail builds trust and ensures reliable, secure AI.

- **Precision Retrieval to Minimize Data Exposure:**

Instead of searching everything, our intelligent routing fetches only the exact data needed, reducing exposure and following the 'need-to-know' principle. This limits risk and boosts security and efficiency.

Use case: UNDP

Government & NGO

Description

As UNDP's AI Strategic Partner, FLock is bringing privacy-preserving, decentralized AI to solve global challenges that matter.

Here are key sectors where teams can apply federated learning and decentralized AI to make differences.

- Education & Financial Inclusion
- Climate & Conservation
- Healthcare, Identity & Financial Services Innovation

FLock will mentor five projects, supporting teams in applying federated learning and decentralized AI.

Top teams join Cohort 2 for a 4-month build of implementation-ready pilots.

Education

Financial Services

Healthcare

Identity

Climate & Conservation

Supply Chain

FLock.io

Use case: AIGEN Sciences

AI Medicine

Description

Flock.io is partnering with Aigen Sciences, using Federated Learning (FL) to create a seamless pipeline for AI drug discovery, covering everything from model training to agent development.

Differentiation

Flock.io enables medical clients to **manage datasets at massive scale(10 billions of records)**, while mitigating security, privacy, and compliance risks

By ensuring sensitive data remains local, this approach **reduces the high costs of building and maintaining traditional data pipelines, saving millions of dollars in infrastructure investment**. It also prevents misuse and unlocks the value of enterprise data through secure and scalable AI deployment.

Arena - Validator Example

README Apache-2.0 license

llm-loss-validator

Validator that computes the validation loss for a huggingface-compatible LLM

Environment Setup

We recommend you to use `conda` to manage the python env for this repo.

```
conda create -n llm-loss-validator python==3.10.12
conda activate llm-loss-validator
pip install -r requirements.txt
```

How to run validation script

Automation with GPU

If you wish to continuously receive task assignments, you should use the following command:

```
cd /src
CUDA_VISIBLE_DEVICES=0 \
bash start.sh \
--hf_token your_hf_token \
--flock_api_key your_flock_api_key \
--task_id your_task_id \
--validation_args_file validation_config.json.example \
--auto_clean_cache False \
--lora_only True
```

Bittensor Subnet 96 τ - FLock OFF

- Build a Bittensor subnet to compress large domain datasets into dense, high-quality representations, optimizing federated training for edge AI.

FLock.io

X

Yuma 

Strategic Vision

Building a subnet to compress large **domain-specific datasets into dense formats**, enhancing federated learning efficiency on edge devices.

Leveraging next-gen mobile chips (M-series, A18, Snapdragon), we enable private, continuous fine-tuning of **Small Language Models (SLMs)** directly on user devices.

Creating top-tier SFT/DPO datasets, we aim to launch open-source SLMs that **outperform GPT-4-mini** for decentralized edge AI.

Join the Elite Trainer. Train the Future of AI.

Apply Now

Flock is inviting the world's top machine learning engineers, AI developers, and data scientists to shape the future of decentralized AI. Become a Elite Trainer and contribute to on-chain federated model training while earning rewards.

What is the Elite Trainer Program?

The Elite Trainer Program is Flock's initiative to onboard elite ML talent as training nodes in our decentralized AI Training Arena. This exclusive program gives you access to token-gated training tasks, cutting-edge AI collaboration, and 50% revenue share in model training rewards.

<https://www.flock.io/elite-trainer>

Why join us

- AI & Blockchain for Goods!
- Different level of engagement
 - Trainer - active modelling
 - Validator - 24x7 automation - passive
 - Delegator - no operating overhead - totally passive
- Great option for diversification
 - No token burn
 - Easy setup
 - Overlapping with numerai community

Validator Stake Ratio

Training Node Stake Ratio

Description

The goal is to train a model that acts like a sustainability advisor. Given a company’s context and goals, the model must analyze operations, align with climate targets, and propose a single, audit-ready plan. It combines real-world decision-making (budgets, reporting standards, SDGs) with tool-based reasoning, then delivers a clear final answer. Think of it as your in-house climate strategist - turning complex data into actionable pathways for net-zero. The model will be used for a series of initiatives launched by UNDP and FLock

Status Detail

Created on: Sep 12, 2025 00:07 UTC

Current status: Submission

Total task duration: 28 days

Time remaining until final submission: 17 days 7 hours

Time until task is complete: 21 days 7 hours
