Next-Generation Onchain Asset Management

Manage institutional digital asset portfolios with infrastructure built for privacy, compliance and scale.

Orion Finance

Today’s Investment Landscape

What's Holding Asset Managers Back

1

Operational Overhead

Execution, trade rebalancing, and portfolio operations divert core focus away from alpha generation.

2

Slow Product Rollouts

Deploying new fund vehicles or segregated mandates is slow, costly, and difficult to scale efficiently.

3

IP Exposure

Disclosing portfolio positions or model mechanics risks copycat exploitation and erodes competitive edge.

Meet Orion Finance

The Composable Onchain Portfolio Management Platform

Onchain Vaults

Transform proprietary signals into tokenized, investable strategies.

Confidential Strategies

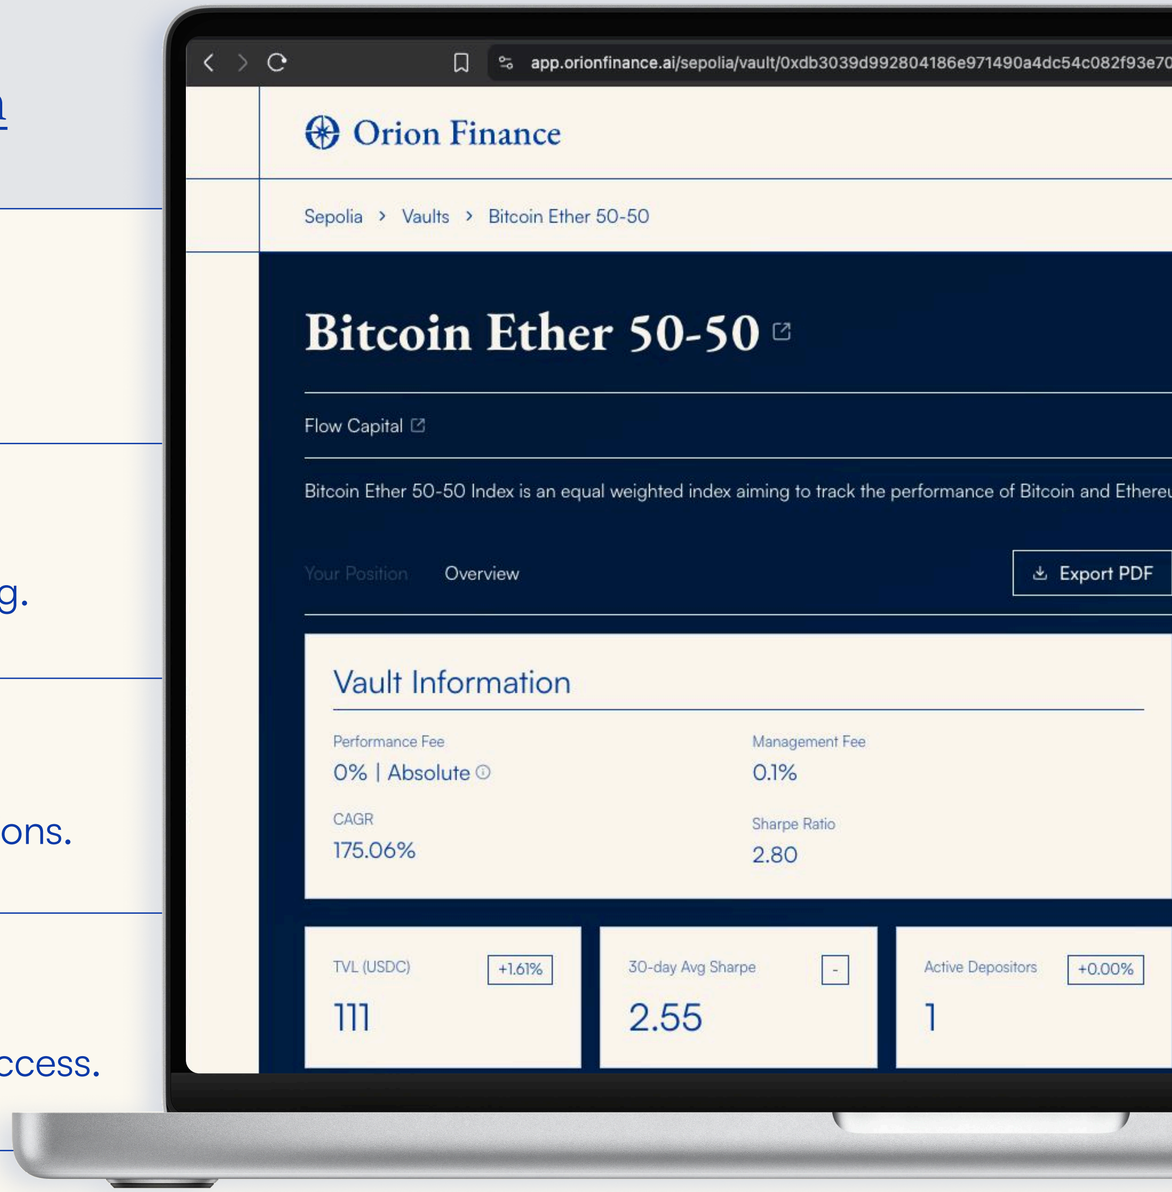

Protect alpha against MEV, front-running, and reverse-engineering.

Digital-Twin Sandbox

Validate execution logic and risk parameters in real market conditions.

Institutional Distribution

Connect to accredited capital through permissioned, compliant access.

Plug Index Methodologies into Onchain Rails

Programmatic Execution for Index Providers

⟶ 1. Define Your Methodology

⟶ 2. Launch via Orion Infrastructure

⟶ 3. Automate Portfolio Operations

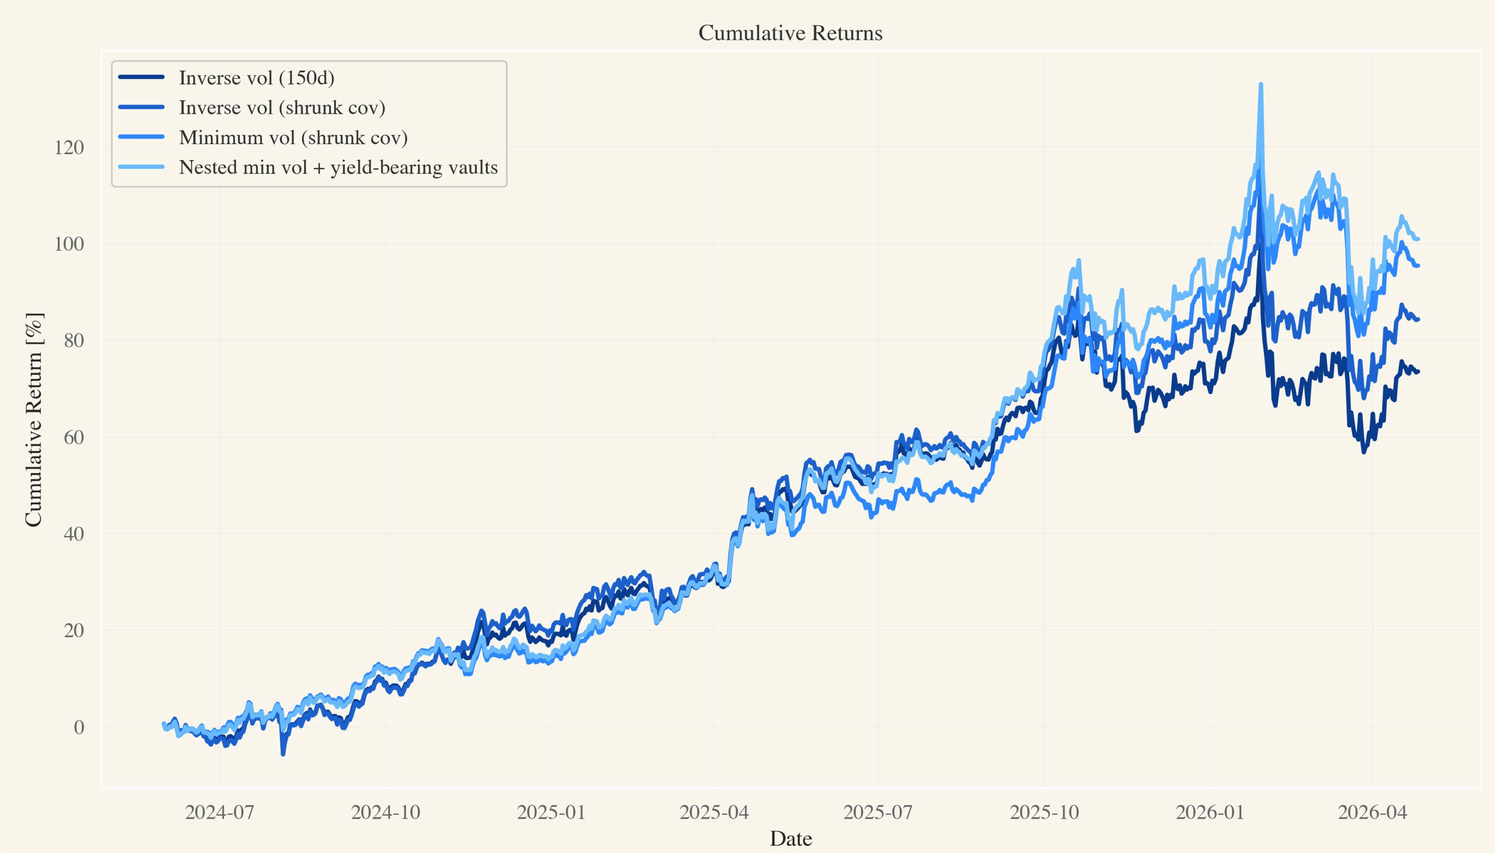

⟶ 4. Scale Product Offerings Faster

Benefit from Operational Alpha

A full investment product lifecycle managed as software infrastructure

- Define portfolio rules, allocations, and fee structures
- Run paper trading and testnet validation against real market data
- Launch vaults with embedded compliance and investor controls

Modular Permissioning at the Protocol Layer

Add deposit, holding, and transfer policies for compliance, capacity, or distribution when required.

1. Deposit Policy

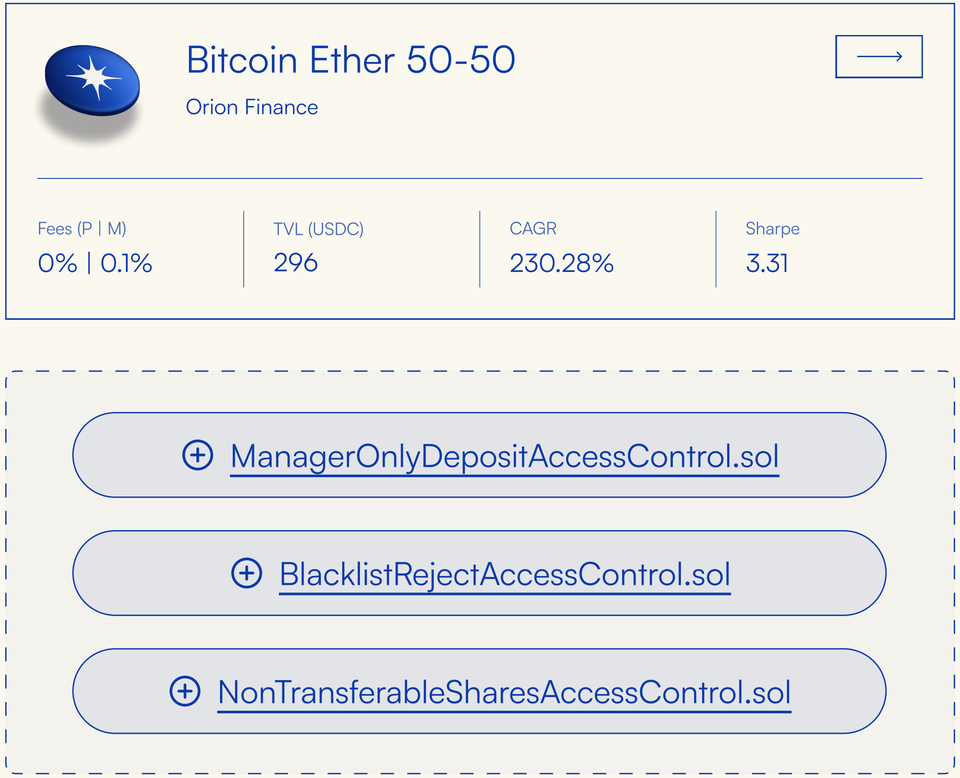

⟶ Control who may **deposit** into the vault via investor eligibility, onboarding credentials, and capacity limits.

2. Holding Policy

⟶ Govern who may **retain shares** through ongoing eligibility, credential expiry, and sanctions monitoring.

3. Transfer Policy

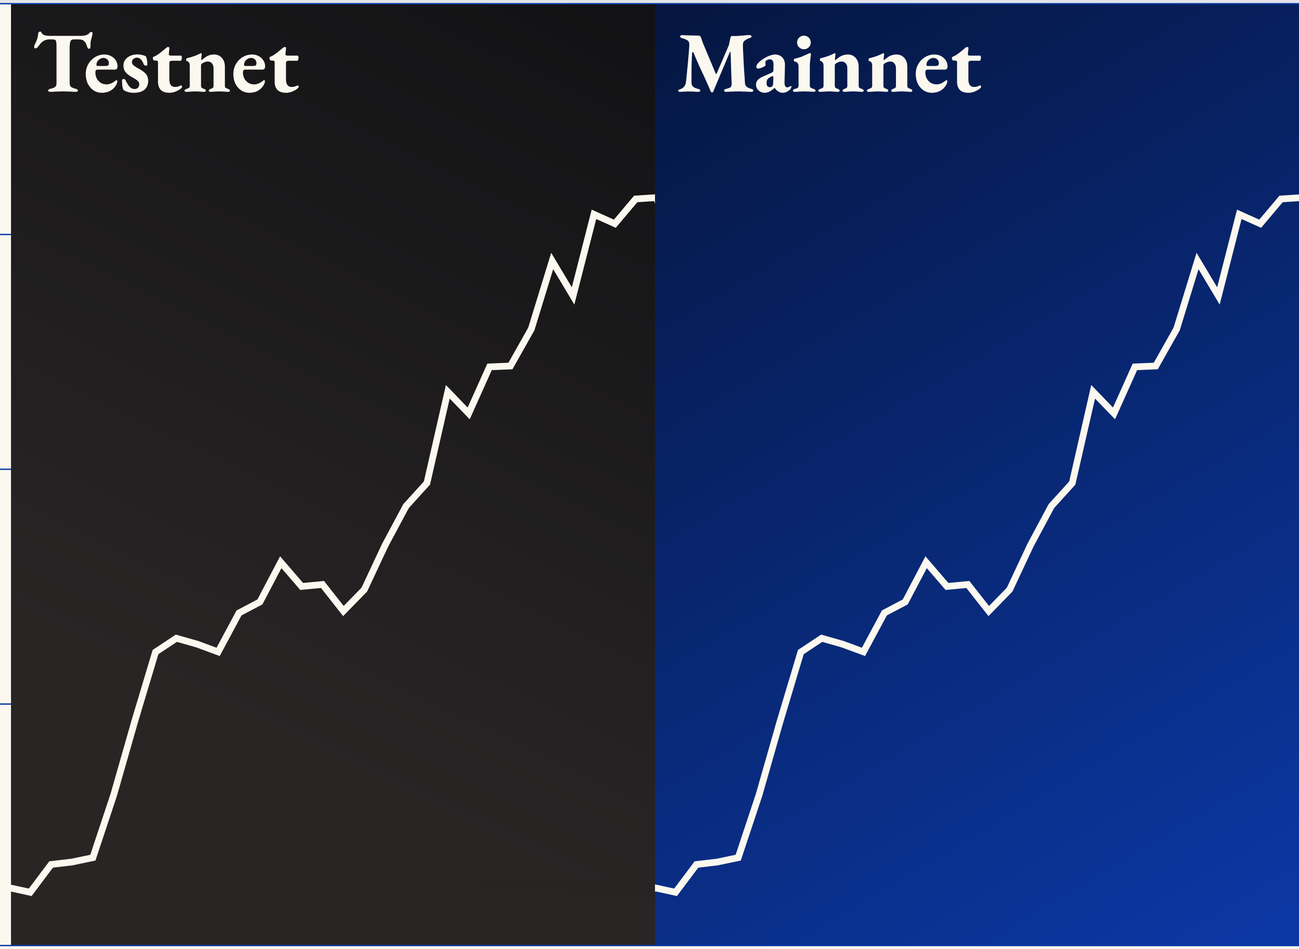

⟶ Regulate who may **send or receive shares** using secondary-market controls and wallet-to-wallet restrictions.

Digital-Twin Sandbox

Validate Execution Logic, Without Client Capital or Regulatory Exposure

- → Simulate execution and slippage, against live, **real-time market data**.
- → Verify strategy performance **out-of-sample** by design.
- → Stress-test portfolio strategies safely with **zero capital risk.**
- → Generate **verifiable audit trails and track records** needed for risk committee sign-off.

Thank you.
