

Your personal crypto research analyst

Too many tokens, too little time

Daily new SPL tokens:
80,000

Project updates across:
**X, Discord, Telegram,
Spaces, Podcasts, etc.**

Manami AI is your personalized crypto analyst helping you **secure generational wealth**

What she does

- Tracks projects 24/7 and proactively keeps you informed
- Recommends **actionable insights** across tokens, stablecoins, defi, and airdrop farming
- Chat with Manami to receive more info about tokens or context about relevant news events
- Help users stay informed and **secure generational wealth**

Wallet

 Solana \$6,000
50 SOL -\$315

Lending

 USDS 2.9% \$100K
100K

 USDC 4.3% \$100K
100K

 Insights

 Oof, your portfolio and the overall market continues to trend down, weighed down by Trump tariffs and overall economic uncertainty. You're down -5% daily, and Bitcoin is down nearly 7% today as well. The fear index is also at multi-year lows, which may indicate a potential buying opportunity soon.

 Looks like you've been holding **SOL** for over 4 weeks. How about considering swapping it to a LST to capture yield, such as **jupSOL** (6.57%) or **jitoSOL** (7.2%)? This would be a relatively low-risk and safe asset to hold instead.

 Been keeping an eye on the Sky eco since you're lending **\$100K USDS** on Kamino. A gov proposal recently passed both increasing the MKR borrow limit and lowering collateral requirements, causing some widespread concerns.

Should I focus more of my research here?

Yes
