The hardest data science tournament in the world.

Predict the stock market.

[SIGN UP](#)[VIEW LEADERBOARD](#)

\$30,350,086

paid to data scientists

7,133

staked models

Start with hedge fund quality data.

It is clean and regularized, designed to be usable right away. Obfuscated, so it can be given out for free.

[DOWNLOAD DATA](#)

id	era	feature1	...	feature1050	target
n2b2e3dd163cb422	era1	0.75	...	0.00	0.25
n177021a571c94c8	era1	1.00	...	0.25	0.75
n7830fa4c0cd8466	era1	0.25	...	1.00	0.00
nc584a184cee941b	era1	0.25	...	0.00	1.00
nc5ab8667901946a	era1	0.75	...	0.25	0.25
n84e624e4714a7ca	era1	0.00	...	0.75	1.00

Each **id** corresponds to a stock at a specific time **era**. The **features** describe the various quantitative attributes of the stock at the time. The **target** represents an abstract measure of performance a fixed number of weeks into the future.

Apply machine learning to predict the stock market.

Build a model using the example Python and R scripts.
Everything you need to get started in one package.

CLONE EXAMPLE SCRIPTS

```
#!/usr/bin/env python
""" Example classifier on Numerai data using a xgboost regression. """

import pandas as pd
from xgboost import XGBRegressor

# training data contains features and targets
training_data = pd.read_csv("numerai_training_data.csv").set_index("id")

# tournament data contains features only
tournament_data = pd.read_csv("numerai_tournament_data.csv").set_index("id")
feature_names = [f for f in training_data.columns if "feature" in f]

# train a model to make predictions on tournament data
model = XGBRegressor(max_depth=5, learning_rate=0.01, \
                     n_estimators=2000, colsample_bytree=0.1)
model.fit(training_data[feature_names], training_data["target"])

# submit predictions to numer.ai
predictions = model.predict(tournament_data[feature_names])
predictions.to_csv("predictions.csv")
```

An example of a complete Numerai model written in Python.

id	prediction
n60dffdaceb7e467	0.25
nadaeef0214b84a8	1.00
nb13883520a4344f	0.25
n423766c5a4fa42a	0.75

Submit models to predict the stock market.

Build reputation to claim your place on the [leaderboard](#). Stake on your model to earn (or burn) cryptocurrency. \$30,350,086 in NMR has been paid to data scientists.

 README

Meetup #1 - 2022-07-16 - London

- Eventbrite - [Link](#)
- Photos - [Link](#)
- Welcoming Remarks by the Numerai Council of Elders - [Video](#)
- Talk #1 - Introduction to Numerai (with Memes) by Jo-fai Chow aka ia_ai - [Video](#) - [Slides](#)
- Talk #2 - A Complete Beginner's Guide to Numerai: From Zero to Hero by Alex Benton aka Aventurine - [Video](#) - [Slides](#)
- Talk #3 - Signals - the Non-ML Approach by Jon Taylor - [Video](#) - [Slides](#)
- Talk #4 - Building a Profitable Signals Model: the Principles Behind Alpha_X/Beta_X by Boogies999 - [Video](#) - [Slides](#)
- Talk #5 - From Tournament to Trading: a Brief Tour of How We Turn Signals into a Hedge Fund by James Elford - [Video](#) - [Slides](#)
- The Numerai Community Fireside Chat by the Numerai Council of Elders - [Video](#)
- Closing Remarks by the Numerai Council of Elders - [Video](#)
- Bonus Talk - Welcome to the Numerai Universe by Jos Eilers - [Slides](#) (Jos couldn't join us on the day)

Meetups – github.com/councilofelders/meetups

Morning: Numerai-related Talks

午前:ヌメライに関する講演

10:30 - 10:45

Welcoming Remarks

Joe & Alex @ The Numerai Council of Elders

10:45 - 11:15

Updates and Strategy for Numerai in 2024 [Japanese]

Yuichiro Nishimoto

11:15 - 11:45

Submission with Numerai Compute using GCP Batch [Japanese]

Regonn

By using GCP Batch for submission, you can increase the flexibility of your model, starting the server only at the time of submission and minimizing costs. About Regonn: I am a freelance engineer fro...
